Code Monkey

A large, rectangular pizza is shown inside an open cardboard box. The pizza is cut into many small, square slices. It has a variety of toppings, including what appears to be pepperoni, mushrooms, and green herbs. The pizza is resting on a piece of parchment paper. The cardboard box is light brown and has some tape visible on the edges. The background is slightly out of focus, showing a white surface.

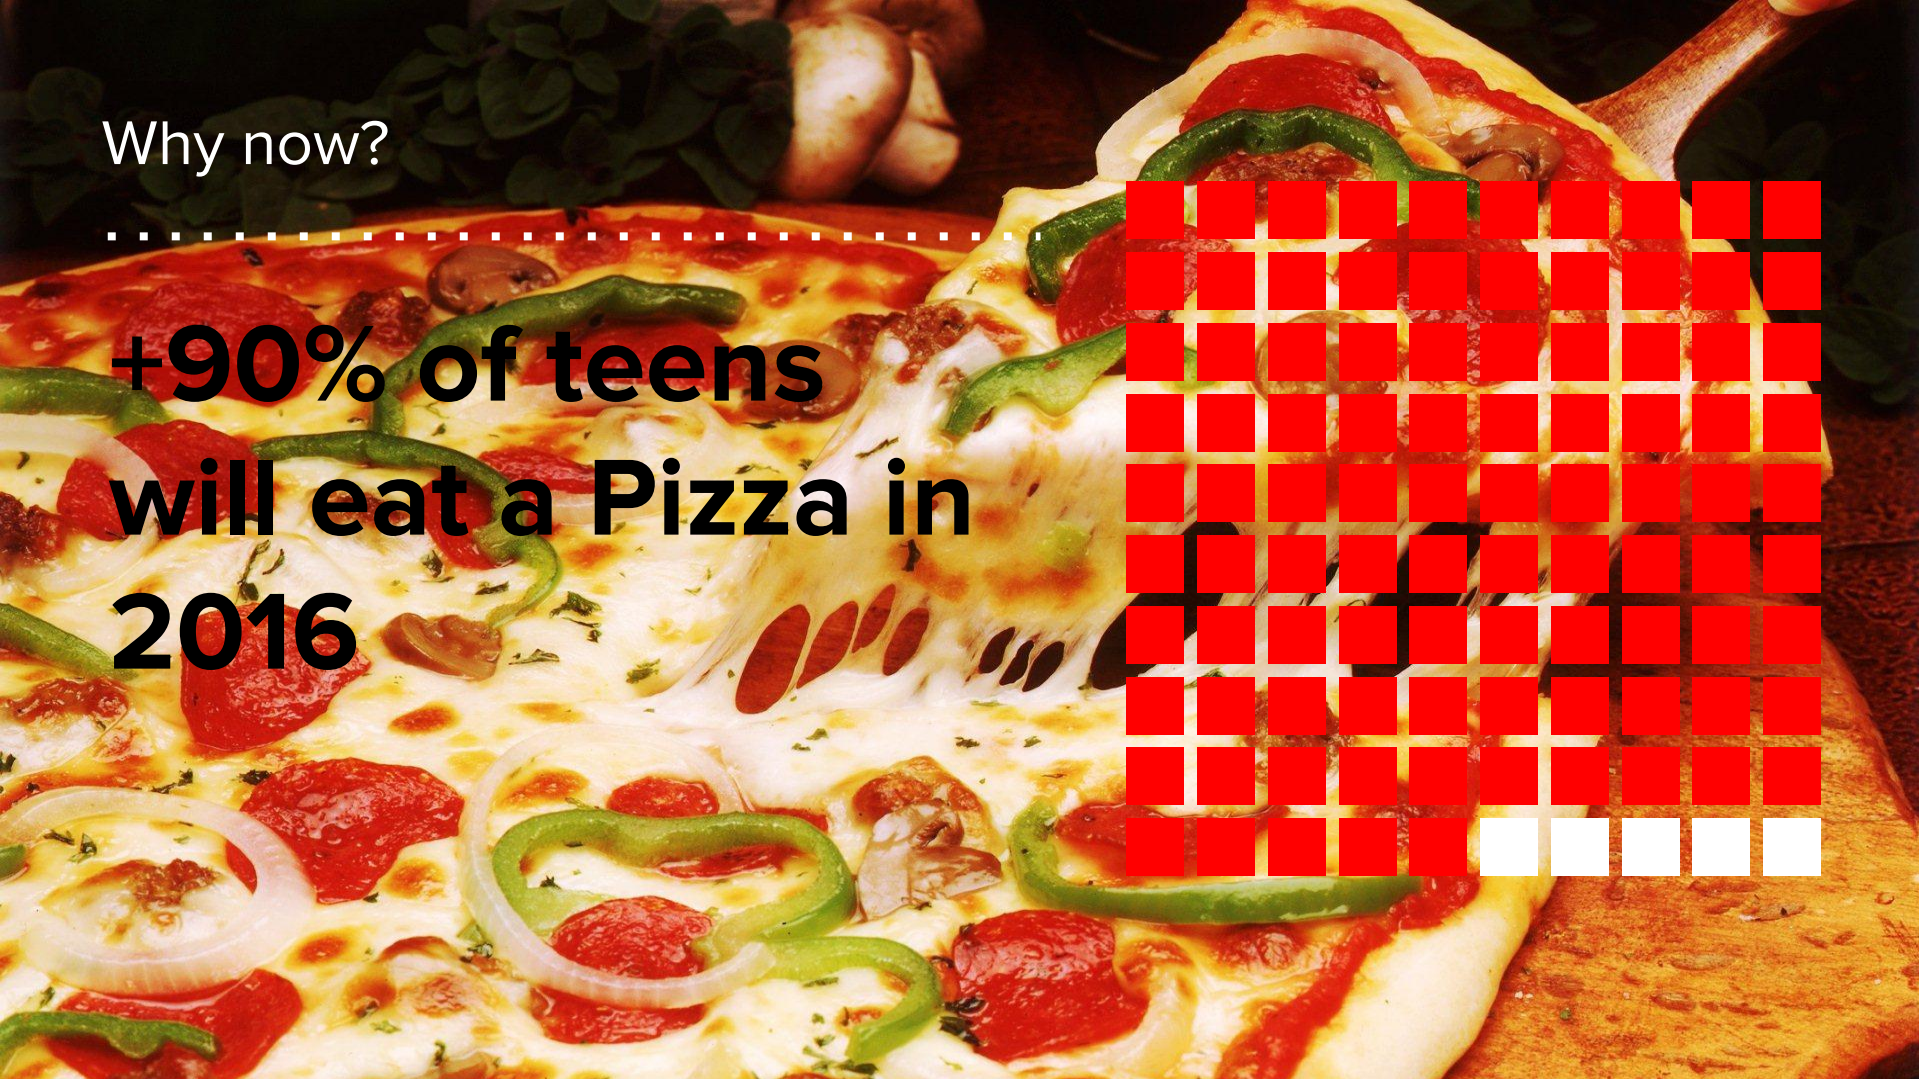

Our mission is to
spread the word of
Mom and Dad's
Pizza Pad *tastefully*
to a teen audience.

Why now?

.....

**+90% of teens
will eat a Pizza in
2016**

will eat a Pizza in
2016**

Game Overview

-  The objective of the game is for Pizza Boy Joe, to retrieve all of his stolen pizza back from the Anger Crew by fighting them
-  The player can encounter Angry Larry, who is the leader of the Angry Crew, and main culprit in stealing poor Joe's pizza delivery
-  Bonus attributes are earned as more enemies are fought, and more items are found

Proposed Architecture

MVC Methodology

Java

How it works

Model

Capturing the behaviour

The model is manipulated by the controller layer, and uses the controller input to update the view

View

What the user sees

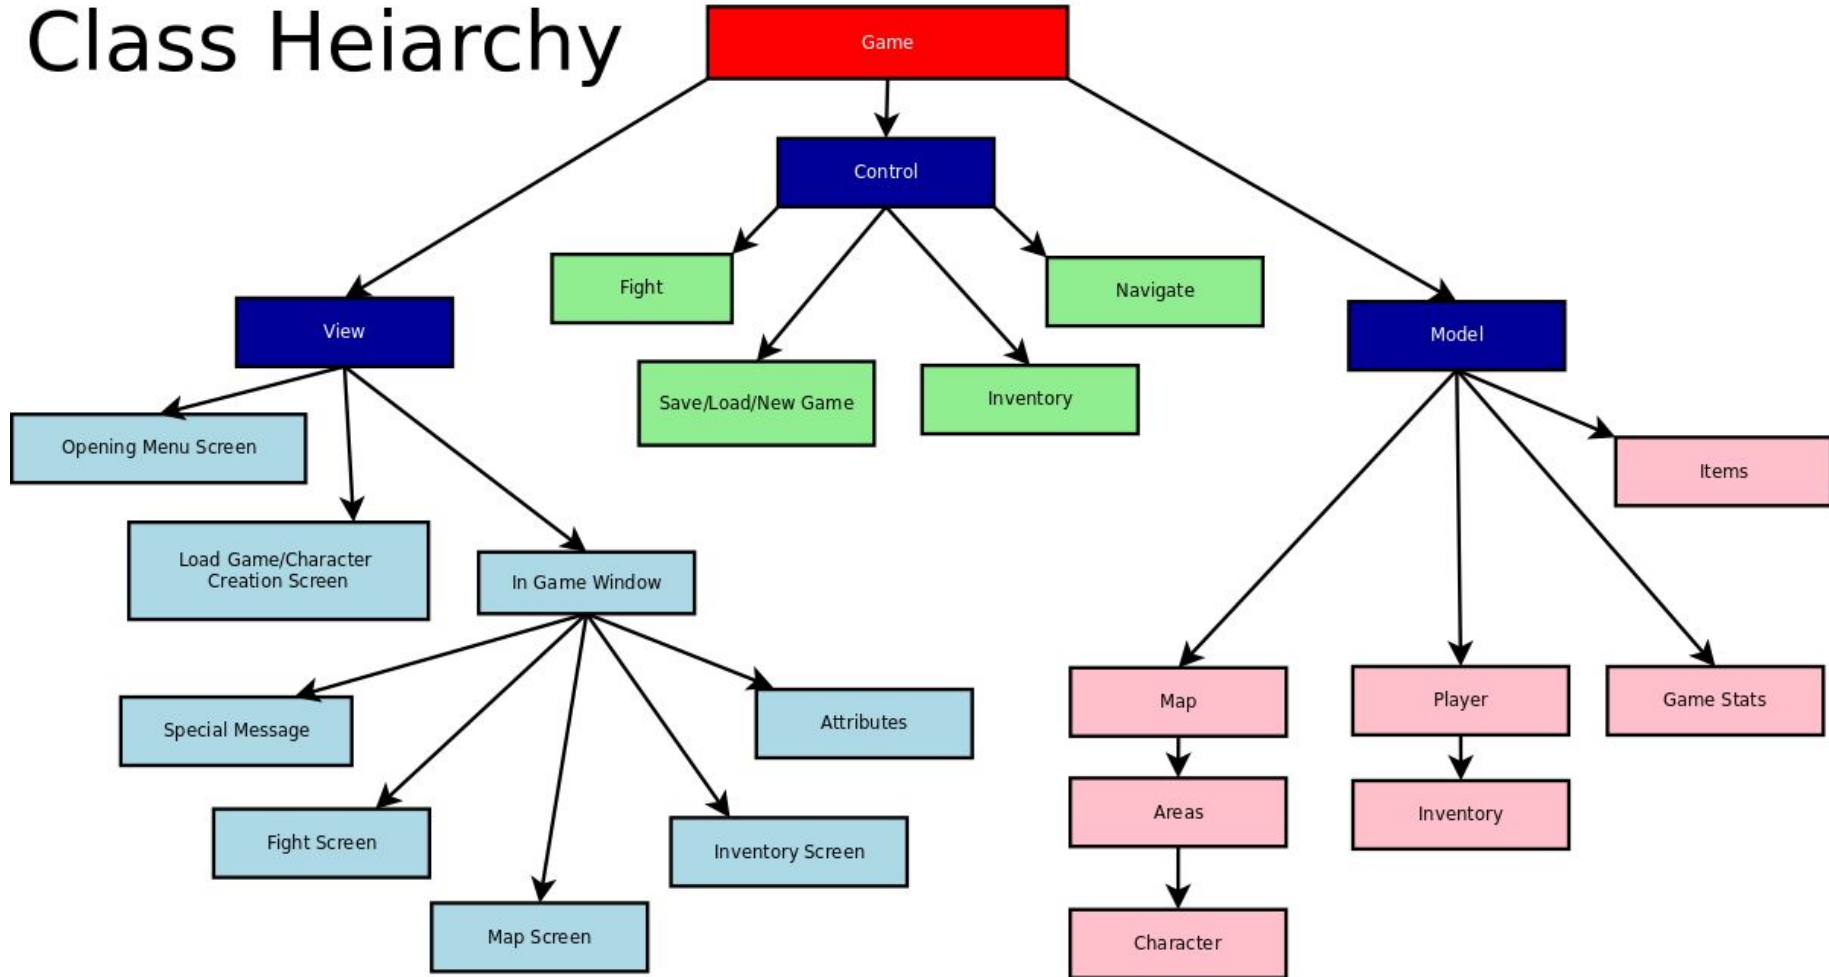

The view is the layer that holds the GUI components, and is sent updates from the model layer

Controller

What the user *uses*

The controller layer takes input from peripherals, mostly a keyboard or mouse in our case, and sends that information to the model layer

Class Hierarchy

Mom and
Dad's Pizza
Pad: Pizza
Adventure

Requirements

Map

City Street Tiles

- This screen shows different street tiles throughout the map. This is where the player can move around the map when in a tile with an enemy a fight will start

Streets

- Each street can hold max one enemy, a hidden item or nothing at all. They are all given unique names to help the player navigate.

Street Edges

- At the edges of each street the player can click to progress to another adjacent street. They can go up, down left or right.

Street Qualities

- Each street can have one or none of the following qualities, slipperiness, poison gas, pizza whiff.

Inventory

Fights

Stats Button

- Selecting this option will show an overlay on the fight-screen GUI that shows the player their attributes

Attack Button

- This brings up a small menu overlay that gives a choice of attacks
 - Pepperoni Bazooka
 - Pizza box smash
 - Pizza cutter

Item Button

- Displays items and let the player use one.

Flee Button

- Allows the player to escape from the battle.
